

More socio-economically mixed schools give more HAVO+ advice, especially when disadvantage is lower

How is within-school heterogeneity in socio-economic disadvantage associated with the proportion of students receiving final HAVO-or-higher advice, accounting for the school population's average socio-economic disadvantage?

HAVO+ advice:

Share of final recommendations that are HAVO, HAVO/VWO or VWO.

Avg. socio-economic disadvantage:

Average socio-economic disadvantage of the school population; higher = more disadvantaged. Defines the bins.

Socio-economic heterogeneity:

Differences in socio-economic disadvantage among pupils within a school; higher = more heterogeneous.

← *Less disadvantaged*

10 equal-sized bins of avg. socio-economic disadvantage

More disadvantaged →

Bin 1

25-26.7

Bin 2

26.7-27.5

Bin 3

27.5-28.2

Bin 4

28.2-28.9

Bin 5

28.9-29.4

Bin 6

29.4-30.1

Bin 7

30.1-30.8

Bin 8

30.8-31.6

Bin 9

31.6-32.6

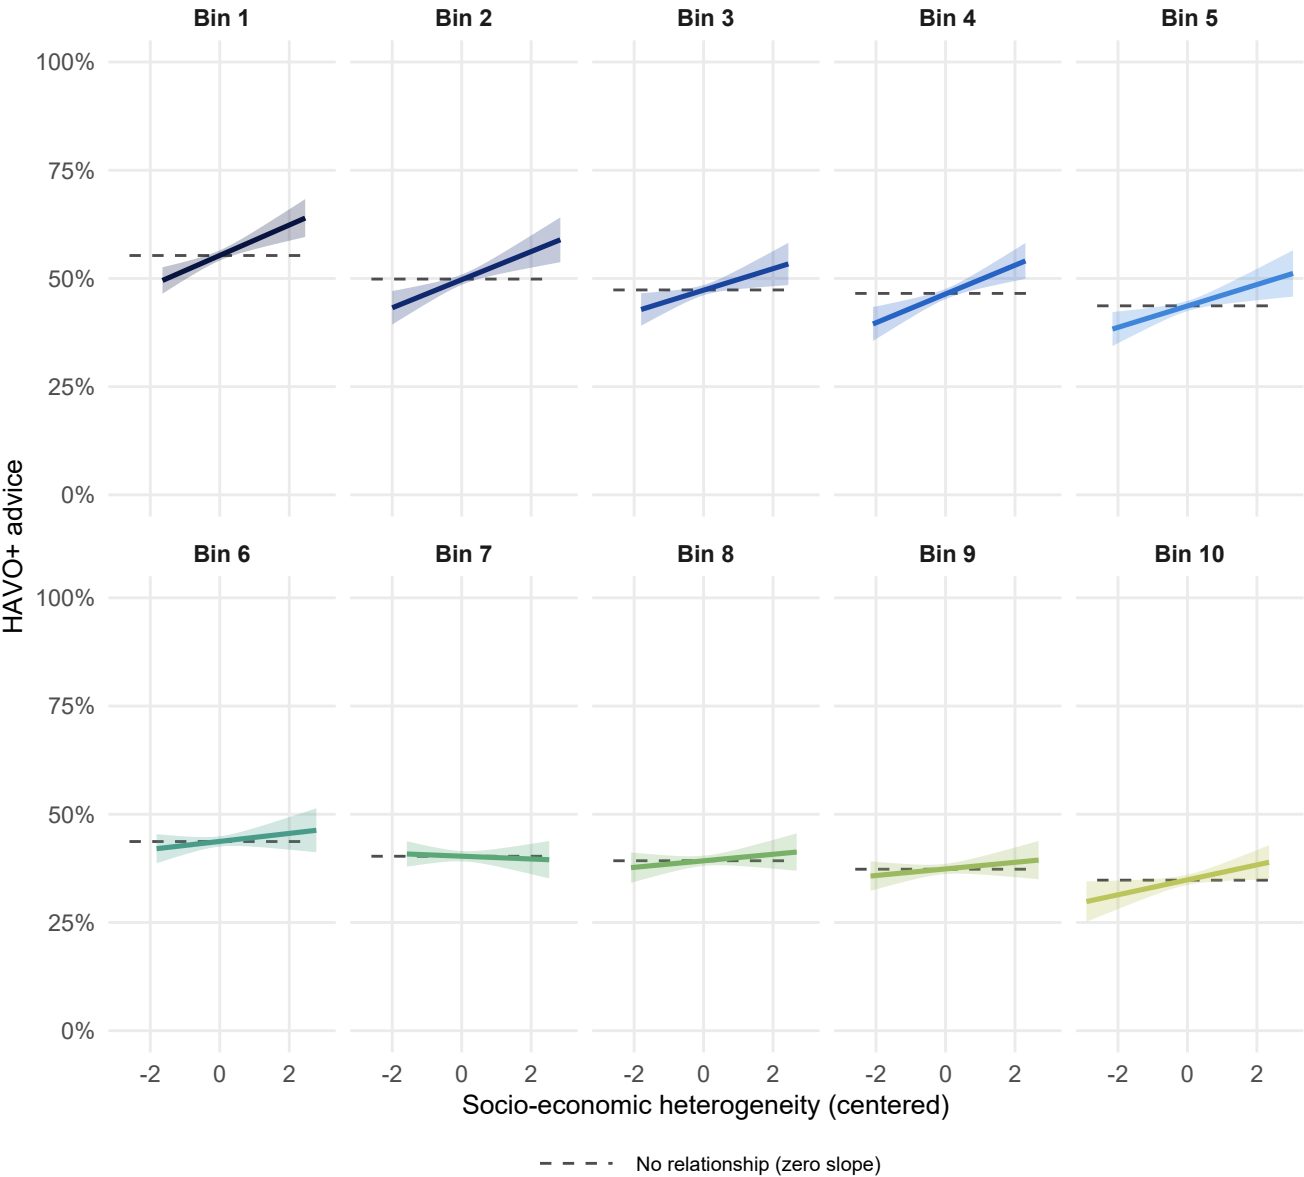

Bin 10

32.6-34.4

Numbers within bins show the range of avg. socio-economic disadvantage. 445-446 schools per bin.

Schools in the lowest and highest disadvantage deciles excluded due to lower within-school socio-economic heterogeneity.

Fitted HAVO+ advice by socio-economic heterogeneity

Slopes with confidence intervals of heterogeneity on advice
